EXPERIENCE

Maven Clinic

Product Designer III

Oct 2024 – June 2026

- Created Cycle Tracker's dynamic primary entry point, the most prominent placement on the homepage, raising feature onboarding from 18% to 24% across all fertility users and contributing to a 30% unassisted conception rate.
- Led end-to-end design on Maven's first-to-market integration of FDA-listed ovulation prediction data from Oura, enabling real-time cycle insights and irregular cycle flagging within Cycle Tracker, with a goal of increasing ovulation–confirmation tool usage from 8% to 20% via the integration.
- Consolidated a fragmented set of tool and integration entry points into a single hub configurable by user type, successfully rolled out to 100% of users, freeing up the homepage's most valuable real estate for higher-impact targeted content.
- Shipped Maven's first fertility condition homepage experience, closing a care gap for the 10% of users living with PCOS and creating a module template for additional condition-specific care pathways.

Product Designer II

Feb 2022 – Sep 2024

- Shipped Maven's first AI feature, Support Chat, from 0 to 1 to production rollout, designing the conversational AI logic and escalation paths that deflected 91% of 12,000+ conversations from human support without sacrificing quality. Established foundational conversational AI patterns that carried into Maven's subsequent AI strategy, and reviewed regularly with executive leadership.
- Redesigned the video appointment experience powering all telehealth visits for 28M covered lives, supporting 250K appointments a year across pre/post-appointment flows, device permissions, error states, and provider EMR note-taking.

Signify Health

Product Designer

Sep 2019 – Jan 2022

- Worked on "Episode Connect," Signify's proprietary enterprise workflow application used to track and manage bundled patient episodes of care.
- Led research and design for Signify's analytics product, designing data-rich dashboards that enabled stakeholders to identify financial and operational opportunities across bundled payment programs representing ~\$6B in annual spend.
- Built "Patients Followed," a feature that reduced time spent managing patients by 8.5 hours per week per user.

Emaze • Content Manager

Oct 2016 – Jun 2019

Force Therapeutics • Client Success Associate

Jan 2016 – Jun 2016

EDUCATION

New York University

CLASS OF 2016

B.S., Global Public Health & Applied Psychology
